

Empowering Plant Breeders

We believe that the adoption of better practices in plant breeding is facilitated by bringing together the right people at the right time:

Capacity Development

E-learning modules, how-to tutorials for the Breeding Management System (BMS), and training opportunities for your professional advancement.

Breeding Services

Tap into a vast network of partners and service providers to access quality genotyping, phenotyping and location analysis services at concessionary rates.

Crop information & Genomics

Use our online knowledge base to access crop-specific databases and query tools, standardised trait dictionaries, a catalogue of diagnostic markers and germplasm, and a large repertoire of scientific publications.

Community

Enlist in our online communities and interact with crop researchers and breeders, data managers, and software specialists, to obtain assistance and share your expertise.
